

PUBLIC WORKS REPORT

November 2025

WATER:

In the month of November, the water system operated in accordance with TECQ regulations. Annetta underwent its biannual inspection from TCEQ on the water system. No major violations were found. A lightning strike at the water tower damaged the town's Scada system. The new Scada system was already scheduled to be installed in December, and the amount of time to repair the outgoing equipment would delay the installation of the new. The public works crew worked to make several water plants operational off pressure switches. This allowed the water distribution to operate without Scada. The new Scada is being installed currently.

A boring contractor struck an 8 inch water main on November 26 causing pressure to drop citywide. Public work personnel were able to isolate the affected area and alongside Tejas contractors were able to make repairs to the line. A water service line was also repaired in the 100 block of St. Andrews.
